SUMMARY

AI-focused Product Designer with **4+ years** designing end-to-end web and mobile products, specializing in human-AI interaction, RAG-based experiences, and AI trust and transparency design. I move from user research to prototypes to development-ready design, grounded in HTML/CSS, React, and TypeScript so decisions stay technically feasible. Delivered measurable outcomes including a **22% reduction in task-completion time**, first-try completion increase from **73% to 89%**, and a citation-grounded AI assistant returning validated answers in **under 30 seconds with 100% citation accuracy**. Experienced across fintech, healthcare, and B2B SaaS, with strengths in design systems, accessibility (WCAG 2.1 AA), and shipping AI-powered product experiences end to end.

EXPERIENCE

Product Designer

Jan 2025 – Present

BILL Holdings, Inc.

San Jose, CA

- Design end-to-end financial product experiences from problem framing, user flows, and wireframes through high-fidelity Figma designs, prototyping, developer handoff, and design QA within 2-week Agile sprints alongside product managers and engineers.
- Own and evolve a **40+ component design system** across web and mobile using reusable components, design tokens, auto layout, responsive patterns, and accessibility standards.
- Conduct usability testing with 8–10 participants per sprint and translate research synthesis into prioritized design changes each iteration.
- Reorganized dashboard information architecture using card-sorting research, reducing average task-completion time by **22%** in follow-up usability testing.
- Partner with front-end engineers on implementation feasibility and use AI tools (Claude for research synthesis, Figma AI for first-pass layouts) to accelerate iteration, keeping final design and UX decisions my own.

Product Designer

Feb 2024 – Jan 2025

Fidelity Investments

Westlake, TX

- Designed wireframes, user flows, high-fidelity interfaces, and prototypes for **3 client-facing web applications**, collaborating directly with product and engineering teams.
- Led user interviews and competitive analysis for a B2C product, translating research insights into a restructured onboarding experience focused on improving activation.
- Built a shared Figma component library covering buttons, forms, typography, color styles, and interaction patterns adopted across **2 product teams**.
- Implemented approximately **15 UI components in HTML/CSS and React**, improving design-development collaboration and validating technical feasibility.
- Facilitated 2–3 stakeholder review rounds per project, resolving competing priorities and defending core design decisions through user evidence, product goals, and accessibility standards.

UI/UX Designer

Jul 2020 – Dec 2021

Atos Syntel

Chennai, India

- Designed responsive web and mobile experiences for technology products, translating business requirements and user needs into user flows, wireframes, prototypes, and high-fidelity UI.
- Conducted user interviews, competitor research, workflow analysis, and usability reviews to identify friction and inform iterative design decisions.
- Created reusable UI patterns for dashboards, forms, navigation, tables, cards, alerts, and responsive layouts, establishing foundational design-system practices.
- Collaborated with developers to validate HTML/CSS implementation, responsive behavior, and technical feasibility, while participating in Agile ceremonies, design reviews, and stakeholder presentations throughout delivery.

PROJECTS

Testimonium – AI Research Assistant for SEC Filings | RAG, Next.js, Gemini

2026

- Shadowed an equity research team for two days and interviewed five analysts, uncovering a seven-step manual workflow (Cmd+F search, manual page citation) costing 6–8 hours per analyst weekly, then reframed the problem from a smarter document-search overlay into an **“answer with receipts” assistant** after research showed analysts needed synthesized answers with sources, not ranked keyword matches.

- Architected and built a full RAG pipeline solo, end to end: Next.js 14, TypeScript, and Tailwind CSS frontend; PDF chunking and section-tagging; Gemini embeddings with cosine-similarity retrieval; and a Redis-backed session store powering citation-grounded answers with an inline confidence gauge.
- Deployed to production on Vercel with CI via GitHub, root-causing and fixing five real production issues spanning serverless runtime constraints, a retired model dependency, and cross-instance data persistence.
- Validated through a live verification session with the research team: **100% citation accuracy, zero false citations, and sub-30-second time-to-first-answer** on pre-processed filings.

Navi – AI Financial Wellness Coach | *B2B Banking, Human-AI Interaction* 2026

- Led product discovery for an embedded AI financial coach, conducting **19 stakeholder interviews** (7 HR managers, 12 employees) that surfaced financial-anxiety triggers and drove a pivot from a standalone app to an embedded Slack/Workday/BambooHR agent after research showed employees would not adopt an additional benefits app.
- Designed 8 interactive screens across 3 surfaces with a trust architecture of confidence scores, human override, and privacy-first data surfacing.
- Built a 321-line design token specification in pure CSS, framework-independent and fully themeable for white-label deployment.
- Validated the design through an 8-participant usability study: **38-second time-to-act vs. 4.2-minute manual benchmark, 4.4/5 trust rating, and 7/8 adoption intent.**

FinFlow – B2B Expense Management Dashboard | *Product Discovery, Design Systems* 2025

- Conducted stakeholder interviews, persona research, and workflow mapping to define requirements for a B2B expense-management platform.
- Built a comprehensive Figma design system covering typography, design tokens, icons, forms, tables, reporting, and reusable interaction patterns.
- Designed and prototyped **30+ desktop screens** plus a mobile submission flow covering approvals, reimbursements, reporting, cards, and account management.
- Improved first-try task completion from **73% to 89%** across two rounds of usability testing and hypothesis-driven iteration.

MedBridge – Healthcare Patient Portal Redesign | *UX Research, Accessibility* 2024

- Ran contextual research across MyChart, Zocdoc, and Teladoc plus AI-assisted competitive analysis (Perplexity) to identify usability gaps beyond a standard feature comparison.
- Designed and prototyped **30+ screens** spanning login, dashboard, provider search, scheduling, messaging, medical records, and payments.
- Built a reusable design system and applied **WCAG 2.1 AA** principles across navigation, forms, color contrast, focus states, and interaction patterns.
- Used journey mapping, task analysis, and iterative prototyping to simplify complex healthcare workflows and improve information architecture.

SKILLS

Product Design: Product Discovery, Problem Framing, Product Thinking, MVP Definition, Feature Prioritization, Interaction Design, User-Centered Design, Information Architecture, Responsive Design, Success Metrics

UX Research: User Interviews, Contextual Research, Journey Mapping, Jobs To Be Done, Personas, Competitive Analysis, Card Sorting, Tree Testing, Usability Testing, Research Synthesis, Hypothesis Validation

Design Systems & Accessibility: Figma, Design Tokens, Component Libraries, Auto Layout, Responsive Systems, WCAG 2.1 AA, Inclusive Design, Color Contrast, Focus States, Keyboard Navigation, ARIA Labels

AI Product Design: Claude, ChatGPT, Perplexity, Gemini, Figma AI, Cursor, Human-AI Interaction, AI-Assisted Research, AI Prototyping, Prompt Engineering, RAG UX, AI Trust & Transparency

Front-End & Engineering: HTML5, CSS3, JavaScript, React, TypeScript, Next.js, Tailwind CSS, Framer Motion, Vite, Storybook, Git/GitHub, Redis, Vercel, CI/CD

Process: Agile/Scrum, Sprint Planning, Design Critique, Stakeholder Alignment, Developer Handoff, Design QA, FigJam, Miro, Maze, Netlify, Analytics, SEO Basics

EDUCATION

Saint Louis University

M.S. Computer Science

Bharath University

B.Tech. Computer Science

St. Louis, MO

Jan 2022 – Dec 2023

Chennai, Tamil Nadu, India

Jun 2017 – May 2021
