

Naveen Sereddy

Product Designer — UI/UX Designer

Overland Park, KS (Open to Relocation) | (816) 430-3068 | naveensereddy@gmail.com | linkedin.com/in/naveensereddy | github.com/Naveen-Sereddy | naveensereddy.com

SUMMARY

Product Designer with 3 years designing end-to-end web and mobile products across discovery, research, and developer handoff. I frame problems before jumping to solutions, then move from user research to prototypes to development-ready design, grounded in HTML/CSS and React so decisions stay technically feasible. Delivered measurable outcomes including a first-try task completion increase from 73% to 89% on a B2B expense platform and a reduction in core task time from 4.2 minutes to 38 seconds. Fintech and healthcare domain experience, with strengths in design systems, accessibility, and usability-driven iteration. I use AI tools (Claude, ChatGPT, Perplexity, Figma AI, Cursor) as a productivity multiplier across research synthesis, ideation, and prototyping, while owning the final design decisions myself.

EXPERIENCE

UI/UX Designer

Jan 2025 – Present

Bill Holdings, Inc. (BILL)
San Jose, CA

- Design end-to-end product flows for a financial services platform, from problem framing and wireframes to development-ready Figma files, embedded in 2-week Agile sprints alongside product managers and engineers
- Own and maintain a 40+ component design system across web and mobile, built with reusable component libraries, design tokens, and auto layout, with contrast, focus states, and labeling built in at the component level
- Conduct usability testing with 8–10 participants per sprint and translate research synthesis into prioritized design changes each iteration
- Reorganized dashboard information architecture based on card-sorting sessions, reducing average task completion time by 22% in follow-up usability testing
- Partner with front-end engineers on implementation feasibility and run design QA before developer handoff to catch issues early
- Use AI tools (Claude for research synthesis, Figma AI for first-pass layouts) to accelerate iteration, keeping final design and UX decisions my own

Product Designer

Feb 2024 – Jan 2025

Fidelity Investments
Westlake, TX

- Designed wireframes, user flows, and high-fidelity mockups in Figma for 3 client web applications, and implemented ~15 UI components in HTML/CSS and React in direct collaboration with engineering
- Led user research (user interviews and competitive analysis) for a B2C product, informing a restructured onboarding flow to improve activation
- Built a shared Figma component library spanning buttons, forms, typography, and color styles, adopted across two product teams
- Facilitated 2–3 stakeholder review rounds per project, resolving competing priorities and defending core design decisions

PROJECTS

Testimonium | AI Research Assistant for SEC Filings (RAG, Next.js, Gemini)

2026

- Shadowed an equity research team for two days and interviewed five analysts to map a seven-step manual workflow (Cmd+F search, manual page citation) costing 6–8 hours per analyst weekly during earnings season
- Reframed the problem from a smarter document-search overlay to an “answer with receipts” assistant after research showed analysts needed synthesized answers with sources, not ranked keyword matches
- Architected and built a full RAG pipeline solo, end to end: Next.js 14, TypeScript, and Tailwind CSS frontend; PDF chunking and section-tagging; Gemini embeddings with cosine-similarity retrieval; and a Redis-backed session store powering citation-grounded answers with an inline confidence gauge
- Deployed to production on Vercel with CI via GitHub, root-causing and fixing five real production issues spanning serverless runtime constraints, a retired model dependency, and cross-instance data persistence
- Validated through a live verification session with the research team: 100% citation accuracy, zero false citations, and sub-30-second time-to-first-answer on pre-processed filings

Navi | AI-Powered Financial Wellness Coach (B2B Banking)

2026

- Led product discovery for an embedded AI financial coach; conducted 19 stakeholder interviews (7 HR managers, 12 employees) and synthesized findings into financial anxiety triggers and trust requirements

- Reframed the problem and pivoted from a standalone app to an embedded Slack/Workday/BambooHR agent after research validated that employees would not adopt an additional benefits app
- Designed 8 interactive screens across 3 surfaces with a trust architecture of confidence scores, human override, and privacy-first data surfacing
- Built a 321-line design token specification in pure CSS, framework-independent and fully themeable for white-label deployment
- Validated the design through an 8-participant usability study: 38-second time-to-act vs. a 4.2-minute manual benchmark, 4.4/5 trust rating, and 7/8 adoption intent

FinFlow | *B2B Expense Management Dashboard*

2025

- Ran discovery through stakeholder interviews, persona research, and workflow mapping to define requirements for a B2B expense management platform
- Built a complete Figma design system encompassing typography, design tokens, icons, forms, tables, and reporting components
- Designed and prototyped 30+ desktop screens and a mobile submission flow covering approvals, reimbursements, reporting, cards, and account management
- Improved first-try task completion from 73% to 89% across two rounds of usability testing and hypothesis-driven iteration

MedBridge | *Healthcare Patient Portal Redesign*

2024

- Ran contextual research across MyChart, Zocdoc, and Teladoc plus AI-assisted competitive analysis (Perplexity) to identify usability gaps beyond a standard feature comparison
- Designed and prototyped 30+ screens spanning login, dashboard, provider search, scheduling, messaging, medical records, and payments
- Built a reusable design system and applied WCAG 2.1 AA accessibility standards throughout the design process

SKILLS

Product Design: Product Discovery, Problem Framing, Product Thinking, MVP Definition, Feature Prioritization, Interaction Design, User-Centered Design, Success Metrics

UX Research: User Interviews, Research Synthesis, Journey Mapping, Jobs To Be Done, Personas, Competitive Analysis, Card Sorting, Tree Testing, Usability Testing, Hypothesis Validation

Design Systems: Component Libraries, Design Tokens, Auto Layout, Information Architecture, Responsive Design

Accessibility: WCAG 2.1 AA, Color Contrast, Focus States, ARIA Labels, Keyboard Navigation, Inclusive Design

AI Workflow: Claude, ChatGPT, Perplexity, Gemini, Figma AI, Cursor (research synthesis, ideation, rapid prototyping)

AI Engineering: RAG Pipelines, Embeddings, Prompt Engineering, LLM API Integration (Gemini), Next.js, Redis

Front-End: HTML5, CSS3, React, JavaScript, TypeScript, Tailwind CSS, Framer Motion, Vite, Storybook, Git/GitHub

Visual & Graphic Design: Adobe Illustrator, Adobe Photoshop

Process & Tools: Agile/Scrum, Sprint Planning, Developer Handoff, Design QA, Figma, FigJam, Miro, Maze, Netlify Deployment, SEO Basics, Analytics, Vercel, CI/CD (GitHub Actions)

EDUCATION

Saint Louis University

M.S. Computer Science

St. Louis, MO

Jan 2022 – Dec 2023

Bharath University

B.Tech. Computer Science

Chennai, TN

Jun 2017 – May 2021
